TITLE : DIGITAL STILL CAMERA

ABSTRACT : PROBLEM TO BE SOLVED: To retain required image data, even after the transmission of data to a DB server in the digital camera by which an image is sent to the DB server.

SOLUTION: The digital camera converts an electric image signal of an object obtained by an image-pickup element 29 into digital image data and records the data to memories 32, 33. Then a transmission means 20 transmits the image data to an external storage means. Furthermore, the digital camera is provided with a setting means 27 that sets the propriety of the erasure of the image data and with a control means 28 that erases the image data recorded in the memories 32, 33, based on the setting by the setting means 27 after the transmission of the image data.
